DM3300-8
Shown with optional monitor

The DM3300 is a *physical measurement scope* that samples your signals at rates of up to 40 MS/s. Available in 8- and 16-channel models, you can add optional features such as a bright TFT display, a hard drive, and a printer for hard copy recording. With built-in Ethernet and USB computer interfaces and Windows software, the DM3300 can act as a computer controlled front-end, or a fully-functional stand-alone system. Plug-in modules adapt the DM3300 to a variety of sensors and signals – so that you can acquire 8 or 16 channels of voltages, strain gages, and more!

Ethernet & USB Connectivity

Use the software supplied with your DM3300 to transfer data files to your PC.

High-speed Isolated-input Amplifiers

The DM3300 features 2-ch plug-in modules for many kinds of input signals, including

DM33-HSV module

- DM33-HSV high-speed voltage (200 mV to 200V)
- DM33-M voltage and temperature (20 mV to 500V, and thermocouple types J, K, T, R, E, B)
- DM33-DCB DC strain gage (1,000 to 20,000 x 10⁻⁶ strain)

Choice of Memory Devices for Reliable Data Capture

Data is captured directly to the DM3300's internal memory devices. Select the storage device that best suits your application.

Internal RAM

2 Mwords/ch
Ideal for capturing high-speed events up to 40 MS/s, and for use in environments where there are vibrations.

40 GB hard disk*

Ideal for long-term data capture at speeds up to 1 MS/s, and for multi-point measurement.

PCMCIA card**

Enables off-line transfer of data captured at the DM3300 to your PC. In addition, data can be captured directly to the PCMCIA card.
