### **RFID Transponders: Replacement for Magnetic Stripe Cards**

Existing terminals using magnetic stripe cards often are required to be replaced by more modern systems. In most cases, this equals with a complete replacement of the system including all components.

ZeitControl cardsystems GmbH offers a solution where only the magnetic stripe readers have to be replaced. The output signals of the transponder reader MiniMagic Magstripe are fully compatible with the output signals of common magstripe readers. Thus is it not necessary to change anything of the already existing electronics and software.

The expenses are limited to the exchange of the existing magstripe reader to the MiniMagic MagStripe RFID transponder reader.
