

High-containment filling Liner filling head LBK

I-BB LBK-en

Revision 1

High containment filling of Big Bags with liner.

The use of protective liner ensures contamination-free exchange of the Big Bag.

When no Big Bag is connected, the connecting system and the hand-access hole are closed by a protective liner.

The operator and the product are protected against contamination.

For filling receptacles without inliner (e.g. Container), an adapter with a protective liner is attached to the receptacle. Adapter for receptacles without inliner.
