

MULTIEYE® ANPR Gate

Automated number plate recognition software Gate for a secure access control of vehicles.

The camera independent number plate recognition module "MULTIEYE ANPR Gate" offers a cost efficient solution for the access control of vehicles.

Diverse ranges of application: Access- and Exit control in front of a barrier, car park access or the registration of delivery vehicles on company grounds.

The standard version already offers the control of two lanes. Extension is easily done any time by licences (up to 8 cameras/lanes a server). Number plates out of more than 40 countries (focus on Europe) are registered safely and reliable.

Access authorisations for vehicles can be changed very fast and black & white lists can be created for example out of excel-templates. User-friendly alarm management and alarm messaging via e-mail.

The software module offers the integration of external devices for the opening of barriers, switching of traffic lights, etc.

Diverse ranges of application...

The camera independent software solution supports analog and IP cameras.

System requirement

MULTIEYE-NET Software Version 2.3.

Intel Pentium Core 2 Quad

Your Advantages

- **Easy installation and use**
- **Control of two lanes (extension possible)**
- **Camera independent software solution**
- **Recognition of number plates out of 40+ Countries**
- **Easy Upgrade of existing MULTIEYE systems**
