XPM the new generation of Security marking tags

XPM:

Three years of research has resulted in this new generation of flexible anti-theft and asset marking tags. XPM protects your valuable equipment with a permanent marking and a unique identity. With its patented integral insert and unique bonding process its the most sophisticated anti-theft marking system on the market today.

Customer personalisation:

The XPM tags come in both standard and personalised versions. The tags can be printed with full colour logotypes, text of the customer's choice, barcodes and sequential numbering. Our State of the art production system enables us to manufacture the tags in virtually any shape or size making it ideal for protecting equipment of all sizes, from mobile phones to desktop computers.

Registered on a secure online database.

All ID numbers are registered on the international database and customers have access to their own online database/asset registration account, which is **free of charge**. This enables the customer to add personal, and product information for every ID number registered.

International Recovery Service:

The recovery service operates worldwide, 24 hours a day. Any individual or organisation such as the police or customs officers that suspect an item as being lost or stolen can check ownership by contacting the International recovery service via the website or the International free phone number.

XPM Features and benefits

- Combined security marking and asset registration
- Professional attractive marking enhancing company image
- **Free** registration on database
- **Free** online database account with personal access
- **Free** tool for easy fast, clean installation

The innovative XPM marking raises the bar for security marking systems for years to come.

The XPM

Each XPM marking is manufactured in ultra-resistant materials. When combined with a special powerful adhesive it literally welds itself to the equipment forming a bond which is virtually irremovable without substantial damage to the surface.

Thanks to the patented manufacturing system the unique insert bearing the important ID and recovery information, is injected into the heart of the ID marking becoming a well protected integral part of the system (see diagram below).

The system is resistant to solvents, chemicals and other cleaning agents, and in the case of a malicious attempt to remove the plate, the important recovery information remains intact and welded to the equipment.

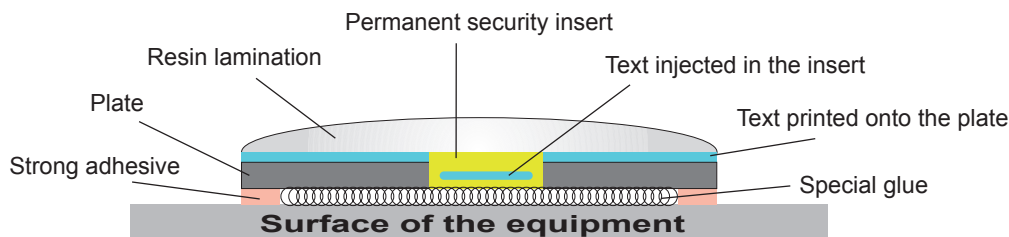

How does it Work?

FRONTAL VIEW

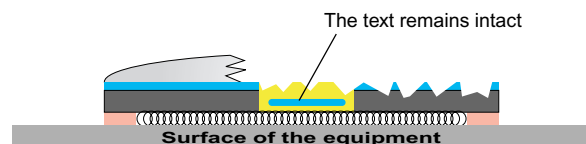

The insert contains essential information for the recovery of the equipment.

SIDE VIEW

RESISTANT AGAINST MALICIOUS REMOVAL

If someone attempts to remove the marking, the injected text remains protected and welded to the equipment.
