

# AntiBac

## Antibacterial products from Villeroy & Boch

### Optimal for strict hygiene regulations

- + Specially designed for environments in which bacteria form a high risk factor.
- + Available for ceramic and seats.
- + Combinable with CeramicPlus for easy cleaning.
- + Extra Hygienic when used on DirectFlush rimless WCs.
- + Tested by the independent BOKEN Quality Evaluation Institute.

### Healthcare

The new antibacterial glaze from Villeroy & Boch is specially designed to be used in environments in which bacteria form a high risk factor. AntiBac is therefore a valuable extra on Villeroy & Boch products used in the healthcare sector.

### Bacteria

AntiBac reduces the amount of bacteria by over 3 Log-Levels (>99.9%). This is tested by the independent quality evaluation institute BOKEN. Its functioning is not reduced by the use of strong detergents, and holds during the lifetime of the product.

### Extra clean with CeramicPlus

AntiBac can be combined with CeramicPlus. Dirt hardly holds onto CeramicPlus products, and liquids run off faster than at conventional products. That means that products with CeramicPlus allow for easy and fast cleaning: saving both time and money.
